

**M.TECH IN IN ECE-(VLSI DESIGN**  
**(PART TIME)**

**SEMESTER I**

Subject Code	Name of Subject	Teaching Period			Credit Points
		L	T	P	
01MVL-101PT	VLSI Technology	4	1	0	5
01MVL-102PT	MOS Circuit Design	4	1	0	5
Practical/Viva-voice					
01MVL-201PT	VHDL circuit design lab	0	0	3	2
01MVL-301PT	Discipline & Co-Curricular activities	0	0	4	1
TOTAL		8	2	7	13

**SEMESTER II**

Subject Code	Name of Subject	Teaching Period			Credit Points
		L	T	P	
02MVL-101PT	Analog VLSI Design	4	1	0	5
02MVL-102PT	Embedded System Design	4	1	0	5
Practical/Viva-voice					
02MVL-201PT	Wireless communication lab	0	0	3	2
02MVL-301PT	Discipline & Co-Curricular activities	0	0	4	1
TOTAL		8	2	7	13

**SEMESTER III**

Subject Code	Name of Subject	Teaching Period			Credit
		L	T	P	
01MVL-103PT	Digital signal processing	4	1	0	5
01MVL-104PT	Digital System Design	4	1	0	5
03MVL-101PT	Algorithms for VLSI Design Automation	4	1	0	5
03MVL-301PT	Discipline & Co-Curricular activities	0	0	4	1
TOTAL		12	3	4	16

**SEMESTER IV**

Subject code	Name of Subject	TEACHING PERIODS			Credit Points
		L	T	P	
02MVL-103PT	CMOS RF Circuit Design	4	1	0	5
02MVL-104PT	VLSI Test & Testability	4	1	0	5
04MVL-301PT	Discipline & Co-Curricular activities	0	0	4	1
TOTAL		8	2	4	11

**SEMESTER V**

Subject Code	Name of Subject	Teaching Period			Credit Points
		L	T	P	
03MVL-102PT	Process, Devices & Circuit Simulation	4	1	0	5
03MVL-201PT	Project work	5	0	0	5
03MVL-202PT	Seminar	3	0	0	3
TOTAL		12	1	0	13

**SEMESTER VI**

Subject code	Name of Subject	TEACHING PERIODS			Credit Points
		L	T	P	
04MVL 201PT	DISSERTATION:				17
	CONTINUOUS EVALUATION	5			
	PROJECT REPORT	6	0	0	
	VIVA VOICE	6			
TOTAL		17	0	0	17

## SEMESTER IV

### VLSI TECHNOLOGY

**Course/Paper: 01MVL-101PT**  
**MVL Semester-I**

Crystal growth & wafer preparation. Processing considerations: Chemical cleaning, getting the thermal Stress factors etc. **Epitaxy**

Vapors phase Epitaxy Basic Transport processes & reaction kinetics, doping & auto doping, equipments, & safety considerations, buried layers, epitaxial defects, molecular beam epitaxy, equipment used, film characteristics, SOI structure.

#### **Oxidation**

Growth mechanism & kinetics, Silicon oxidation model, interface considerations, orientation dependence of oxidation rates thin oxides. Oxides. Oxidation technique & systems dry & wet oxidation. Masking properties of SiO<sub>2</sub>

#### **Diffusion**

Diffusion from a chemical source in vapor form at high temperature, diffusion from doped oxide source, diffusion from an ion implanted layer. **Lithography**

Optical Lithography: optical resists, contact & proximity printing, projection printing, electron lithography: resists, mask generation. Electron optics: raster scans & vector scans, variable beam shape. X-ray lithography: resists & printing, X ray sources & masks. Ion lithography.

#### **Etching**

Reactive plasma etching, AC & DC plasma excitation, plasma properties, chemistry & surface interactions, feature size control & apostrophic etching, ion enhanced & induced etching, properties of etch processing. Reactive Ion Beam etching, Specific etches processes: poly/polycide. Trench etching,

#### **References:**

2. "Solid State Electronics Devices", Prentice Hall, 2002Chen, "VLSI Technology" Wiley, March2003.

### MOS CIRCUIT DESIGN

**Course/Paper: 01MVL-102PT**  
**MVL Semester-I**

#### **Introduction:**

Basic principle of MOS transistor, Introduction to large signal MOS models (longchannel) for digital design.

#### **The MOS Inverter:**

Inverter principle, Depletion and enhancement load inverters, the basic CMOS inverter, transfer characteristics, logic threshold, Noise margins, and Dynamic behavior, Propagation Delay, Power Consumption.

#### **MOS Circuit Layout & Simulation:**

MOS SPICE model, device characterization, Circuit characterization, interconnects simulation. MOS device layout: Transistor layout, Inverter layout, CMOS digital circuits layout & simulation

#### **Combinational MOS Logic Design**

Static MOS design: Complementary MOS, Ratio edlogic, Pass Transistor logic, complex logic circuits. **Dynamic MOS design:** Dynamic logic families and performances. **Sequential MOS Logic Design**

Static latches, Flip flops & Registers, Dynamic Latches & Registers, CMOS Schmitt trigger, Monostable sequential Circuits, Astable Circuits. Memory Design: ROM & RAM cells design.

#### **Interconnect & Clock Distribution**

Interconnect delays, Cross Talks, Clock Distribution. Introduction to low power design, Input and Output Interface circuits. **BiCMOS Logic Circuits**  
Introduction, BJT Structure & operation, Basic BiCMOS Circuit behavior, Switching Delay in BiCMOS Logic circuits, BiCMOS Applications.

**References:**

2. Rabey, "Digital Integrated Circuits Design", Pearson Education, Second Edition, 2003
3. Weste and Eshraghian, "Principles of CMOS VLSI design" Addison-Wesley, 2002

**LAB-VHDL Circuit Design Lab**

**Course/Paper: 01MVL-201PT**

**MVLSemester-I**

Design of following ckt using appropriate software like VHDL/ FPGA.

1. 3 input NAND gate.
2. Half adder.
3. D-Latch.
4. Serial in-serial out shift register.
5. half subtractor
6. multiplexer.
7. Digital clock.
8. ALU

**SEMESTER II**

**ANALOG VLSI DESIGN**

**Course/Paper: 02MVL-101PT**

**MVLSemester-II**

Small Signal & large signal Models of MOS& BJT transistor. Analog MOS Process  
(Double Poly Process)

**MOS & BJT Transistor Amplifiers:**

Single transistor Amplifiers stages: Common Emitter, Common base, Common Collector, Common Drain, Common Gate & Common Source Amplifiers

Multiple Transistor Amplifier stages: CC-CE, CC-CC, & Darlington configuration, Cascode configuration, Active Cascode. Differential Amplifiers: Differential pair & DC transfer characteristics.

**Current Mirrors, Active Loads & References**

Current Mirrors: Simple current mirror, Cascode current mirrors Widlar current mirror, Wilson Current mirror, etc. Active loads, Voltage & current references. Analysis of Differential Amplifier with active load, supply and temperature independent biasing techniques, Frequency Response,

**Operational Amplifier:**

Applications of operational Amplifier, theory and Design; Definition of Performance Characteristics; Design of two stage MOS Operational Amplifier, two stage MOS operational Amplifier with cascodes, MOS telescopic-cascode operational amplifiers, MOS Folded-cascode operational amplifiers, Bipolar operational amplifiers. Frequency response & compensation.

**Nonlinear Analog Circuits:**

Analysis of four quadrant and variable Trans conductance multiplier, Voltage controlled oscillator, Comparators, Analog Buffers, Source Follower and Other Structures. Phase Locked Techniques; Phase Locked Loops (PLL), closed loop analysis of PLL. Digital-to-Analog (D/A) and Analog-to-Digital

(A/D)Converters

### **OTA & Switched Capacitor filters**

OTA Amplifiers. Switched Capacitor Circuits and Switched Capacitor Filters.

## **EMBEDDED SYSTEM DESIGN**

**Course/Paper: 02MVL-102PT**

**MVL Semester-II**

### **Introduction to an embedded systems design:**

Introduction to Embedded system, Embedded System Project Management, ESD and Co-design issues in System development Process, Design cycle in the development phase for an embedded system, Use of target system or its emulator and In-circuit emulator, Use of software tools for development of an ES.

### **RTOS & its overview:**

Real Time Operating System: Task and Task States, tasks and data, semaphores and shared Data Operating system Services-Message queues-Timer Function-Events-Memory Management, Interrupt Routines in an RTOS environment, basic design Using RTOS.

### **Microcontroller:**

Role of processor selection in Embedded System (Microprocessor V/s Micro-controller), 8051 Microcontroller: Architecture, basic assembly language programming concepts, Instruction set, Addressing Modes, Logical Operation, Arithmetic Operations, Subroutine, Interrupt handling, Timing subroutines, Serial data transmission, Serial data communication

### **Embedded system development**

Embedded system evolution trends. Round - Robin, robin with Interrupts, function-One-Scheduling Architecture, Algorithms. Introduction to-assembler-compiler-cross compilers and Integrated Development Environment (IDE). Object Oriented Interfacing, Recursion, Debugging strategies, Simulators.

### **Networks for Embedded Systems**

The I2C Bus, The CAN bus, SHARC link Ports, Ethernet, Myrinet, Internet, Introduction to Bluetooth: Specification, Core Protocol, Cable replacement protocol. IEEE 1149.1 (JTAG) Testability: Boundary Scan Architecture.

### **WIRELESS COMMUNICATION LAB**

**Course/Paper: 02MVL-201PT**  
**MVL Semester-II**

1. Measurement of antenna characteristics :  
Radiation Pattern on polar plots, Beam width and Gain of main lobe for the following types of antennas.
  - (a) Half wave and quarter wave dipole
  - (b) Folded dipole
  - (c) Yagi UDA multiple element folded dipole
  - (d) Hertz Antenna
  - (e) End fire array and broad side array
  - (f) Helix antenna
  - (g) Para boloid reflector antenna
  - (h) Loop antenna
  - (i) Ground plane antenna
  - (j) Log periodic antenna
  - (k) Rhombus antenna
  - (l) Slot antenna
2. Demonstration of modeling of wire antenna using appropriate design software.
3. Simulation of antenna arrays using appropriate software.
4. Design and testing of micro strip rectangular patch antenna using appropriate software.
5. Investigate the transmission characteristics of the link and measure the gain of the microstrip patch antennas. Draw the antenna radiation diagram.
6. Radar Trainer: Working of Doppler radar, velocity of moving object, time and frequency measurement and other applications.
7. To perform Modulation, Demodulation and BER measurement using CDMA – DSSS Trainer.
8. To establish analog/digital communication link and transmit & receive three signals (audio, video, tone) simultaneously using Satellite Communication Trainer.
9. To study GPS Receiver, establishing link between GPS satellite & GPS trainer and measure of latitude & longitude

**SEMESTER III**

### **DIGITAL SIGNAL PROCESSING**

**Course/Paper: 01MVL-103PT**  
**MVL Semester-III**

Discrete time signals and systems, Z-transforms, structures for digital filters, design procedures for FIR and IIR filters. Frequency transformations: linear phase design; DFT. Methods for computing FFT. Noise analysis of digital filters, power spectrum estimation.

Signals and signal Processing: characterization & classification of signals, typical Signal Processing operations, example of typical Signals, typical Signals Processing applications.

Time Domain Representation of Signals & Systems: Discrete Time Signals, Operations on Sequences, the sampling process, Discrete-Time systems, Time-Domain characterization of LTI Discrete-Time systems, state-space representation of LTI Discrete-Time systems, random signals.

Transform-Domain Representation of Signals: the Discrete-Time Fourier Transform, Discrete Fourier Transform, DFT properties, computation of the DFT of real sequences, Linear Convolution using the DFT. Z-transforms, Inverse z-transform, properties of z-transform, transform domain representations of random signals.

Transform-Domain Representation of LTI Systems: the frequency response, the transfer function, types of transfer function, minimum-phase and maximum-Phase transfer functions, complementary transfer functions, Discrete-Time processing of random signals.

Digital Processing of Continuous-Time Signals: sampling of Continuous Signals, Analog Filter Design, Anti-aliasing Filter Design, Sample-and-hold circuits, A/D & D/A converter, Reconstruction Filter Design.

Digital Filter Structure: Block Diagram representation, Signal Flow Graph Representation, Equivalent Structures, basic FIR Digital Filter Structures, IIR Filter Structures, State-space structure, all pass filters, tunable IIR Digital filters. cascaded Lattice realization of IIR and FIR filters, Parallel all pass realization of IIR transfer function, Digital Sine-Cosine generator.

Digital Filter Design: Impulse invariance method of IIR filter design, Bilinear Transform method of IIR Filter Design, Design of Digital IIR notch filters, FIR filter Design based on truncated former sens, FIR filter design based on Frequency Sampling approach. Applications of DSP.

**01MVL-104**

**DIGITAL SYSTEM DESIGN**

**Course/Paper: 01MVL-104PT**

**MVL Semester-III**

Specification of combinational systems using VHDL, Introduction to VHDL, Basic language element of VHDL, Behavioral Modeling, Data flow modeling, Structural modeling, Subprograms and overloading, VHDL description of gates.

Description and design of sequential circuits using VHDL, Standard combinational modules, Design of a Serial Adder with Accumulator, State Graph for Control Network, design of a Binary Multiplier, Multiplication of a Signed Binary Number, Design of a Binary Divider.

Register-transfer level systems, Execution Graph, Organization of System, Implementation of RTL Systems, Analysis of RTL Systems, and Design of RTL Systems.

Data Subsystems, Storage Modules, Functional Modules, Data paths, Control Subsystems, Micro programmed Controller, Structure of a micro programmed controller, Micro instruction Format, Micro instruction sequencing, Micro instruction Timing, Basic component of a micro system, memory subsystem.

I/O sub system, Processors, Operation of the computer and cycle time. Binary Decoder, Binary Encoder, Multiplexers and Demultiplexers, Floating Point Arithmetic-Representation of Floating Point Number, Floating Point Multiplication.

## SEMESTER III

### ALGORITHMS FOR VLSI DESIGN AUTOMATION

**Course/Paper: 03MVL-101PT**  
**MVL Semester-III**

#### **Logic synthesis & verification**

Introduction to combinational logic synthesis, Binary Decision Diagram, Hardware models for High-level synthesis.

#### **VLSI automation Algorithms:**

Partitioning: problem formulation, classification of partitioning algorithms, Group migration algorithms, simulated annealing & evolution, other partitioning algorithms.

Placement, floor planning & pin assignment: problem formulation, simulation based placement algorithms, other placement algorithms, constraint based floor planning, floor planning algorithms for mixed block & cell design. General & channel pin assignment.

Global Routing: Problem formulation, classification of global routing algorithms, Mazer routing algorithm, line probe algorithm, Steiner Tree based algorithms, ILP based approaches.

Detailed routing: problem formulation, classification of routing algorithms, single layer routing algorithms, two layer channel routing algorithms, three layer channel routing algorithms, and switchbox routing algorithms.

Over the cell routing & via minimization: two layers over the cell routers, constrained & unconstrained via minimization  
Compaction: problem formulation, one-dimensional compaction, two dimension based compaction, hierarchical compaction

## SEMESTER IV

### CMOS RF CIRCUIT DESIGN

**Course/Paper: 02MVL-103PT**  
**MVL Semester-IV**

#### **Introduction to RF design and Wireless Technology:**

Design and Applications, Complexity and Choice of Technology. Basic concepts in RF design: Nonlinearly and Time Variance, Intersymbol interference, random processes and noise. Sensitivity and dynamic range, conversion of gains and distortion.

#### **RF Modulation**

Analog and digital modulation of RF circuits, Comparison of various techniques for power efficiency, Coherent and non-coherent detection, Mobile RF communication and basics of Multiple Access techniques. Receiver and Transmitter architectures. Direct conversion and two-step transmitters.

#### **RF Testing**

RF testing for heterodyne, Homodyne, Image reject, Direct IF and sub sampled receivers. BJT and MOSFET Behavior

#### **at RF Frequencies**

BJT and MOSFET behavior at RF frequencies, modeling of the transistors and SPICE model, Noise performance and limitations of devices, integrated parasitic elements at high frequencies and their monolithic implementation

## **RF Circuits Design**

Overview of RF Filter design, Active RF components & modeling, Matching and Biasing Networks. Basic blocks in RF systems and their VLSI implementation, Low noise Amplifier design in various technologies, Design of Mixers at GHz frequency range, Various mixers- working and implementation. Oscillators- Basic topologies VCO and definition of phase noise, Noise power and trade off. Resonator VCO designs, Quadrature and single sideband generators. Radio frequency Synthesizers- PLLS, Various RF synthesizer architectures and frequency dividers, Power Amplifier design, Liberalization techniques, Design issues in integrated RF filters.

## **VLSI TEST & TESTABILITY**

**Course/Paper: 02MVL-104PT**

**MVL Semester-IV**

The need for testing, the problems of digital and analog testing, Design for test, Software testing Faults in Digital circuits: General introduction, Controllability and Observability.. Faultmodels - Stuck-at faults, Bridging faults, intermittent faults

Digital test pattern generation :Test pattern generation for combinational logic circuits, Manual test pattern generation, Automatic test pattern generation - Roth's D-algorithm, Developments following Roth's D-algorithm, Pseudorandom test pattern generation, Test pattern generation for sequential circuits, Exhaustive, non-exhaustive and pseudorandom 70 test pattern Generation, Delay fault testing

Signatures and self test: Input compression Output compression Arithmetic, Reed-Muller and spectral coefficients, Arithmetic and Reed-Muller coefficients ,Spectral coefficients, Coefficient test signatures ,Signature analysis and Online self test

Testability Techniques : Partitioning and ad hoc methods and Scan-path testing , Boundary scan and IEEE standard 1149.1 ,Offline built in Self Test (BIST), Hardware description languages and test Testing of Analog and Digital circuits : Testing techniques for Filters, A/D Converters, RAM, Programmable logic devices and DSP

### **References:**

**SEMESTER V**

## **PROCESS, DEVICES & CIRCUIT SIMULATION**

**Course/Paper: 03MVL-102PT**

**MVL Semester-V**

Introduction, Main data structure & program organization, Geometrical manipulations, Ion implantation, A novel measurement technique for 2D implanted ion distributions, Introduction to partial differential equation solver, the merged multi grid method, Isothermal device modeling & simulation, Non Isothermal device modeling & simulation, hydrodynamic device modeling & simulation.

## **PROJECT WORK**

**Course/Paper: 03MVL-201PT**  
**MVL Semester-V**

### **OBJECTIVE**

The objective of the project work is to enable the students in convenient groups of not more than 3 members on a project involving theoretical and experimental studies related to the branch of study. Every project work shall have a guide who is the member of the faculty of the institution.

The student should select any one of the topics offered from the department or select one on his own duly approved from the department. Candidate is required to submit the detailed synopsis of the work that he would complete in the part-II

Each student shall finally produce a comprehensive report covering back ground information, literature survey, problem statement, project work details and conclusion. This final report shall be typewritten form as specified in the guidelines.

## **SEMINAR**

### **OBJECTIVE**

**Course/Paper: 03MVL-202PT**  
**MVL Semester-V**

The students are to select one technical topic related its branch for Seminar. The student is to submit the synopsis for assessment and approval. Progress for preparation of the seminar topic would be continuously assessed from time to time. Two periods per week are to be allotted and students are expected to present the seminar Progress. A faculty guide is to be allotted and he / she will guide and monitor the progress of the student and maintain the attendance.

Students have to give a final presentation for 15 minutes on his topic. Students are encouraged to use various teaching aids such as over head projectors, power point presentation and demonstrative models. This will enable them to gain confidence in facing the placement interviews

## **Semester VI**

## **DISSERTATION**

**Course/Paper: 4MVL-201PT**  
**MVL Semester-VI**

The student will submit a synopsis at the beginning of the semester for the approval from the University project committee in a specified format. Synopsis must be submitted within a two weeks. The first defense, for the dissertation work, should be held with in a one month. Dissertation Report must be submitted in a specified format to the University for evaluation purpose.
