III Semester Petroleum Technology

03BPE-101: MECHANICS OF SOLIDS

Course/Paper: 03 BPE -101
BPE Semester-III

Unit – 1

Unit – 2
Members subjected to flexural loads: Theory of simple bending, bending moment and shear force diagrams for different types of static loading and support conditions on beams. Bending stresses, Section modulus and transverse shear stress distribution in circular, hollow circular, I, Box, T, angle sections etc.

Unit – 3
Principal planes, stresses & strains: Members subjected to combined axial, bending & Torsional loads, maximum normal & shear stresses; Concept of equivalent bending & equivalent twisting moments; Mohr's circle of stress & strain. Theories of Elastic Failures: The necessity for a theory, different theories, significance and comparison, applications.

Unit – 4

Unit – 5
Transverse deflection of beams: Relation between deflection, bending moment, shear force and load, Transverse deflection of beams and shaft under static loading, area moment method, direct integration method: method of superposition and conjugate beam method. Variation approach to determine deflection and stresses in beam. Elastic strain energy: Strain energy due to axial, bending and Torsional loads; stresses due to suddenly applied loads; use of energy theorems to determine deflections of beams and twist of shafts. Castigliano's theorem. Maxwell's theorem of reciprocal deflections.

MATHEMATICS - III

Course/Paper: 03 BPE -103
BPE Semester-III

UNIT 1 : LAPLACE TRANSFORM - Laplace transform with its simple properties, applications to the solution of ordinary and partial differential equations having constant co-efficient with special reference to the wave and diffusion equations.
UNIT 2: Classification of partial differential equation. Linear partial differential equation of higher order with constant coefficients, Charpit’s method Monges Method
UNIT 3 : Bessel”s functions of first & second kinds, simple recurrence relations, Orthogonal property of Bessel’s transformation, Generating functions Legendre’s function of first kind, simple recurrence relation orthogonal property,, Generating function.
UNIT 5 : COMPLEX VARIABLES -Taylor’s series Laurent’s series poles, Residues, Evaluation of simple definite real integrals using the theorem of residues. Simple contour integration.

GEOLOGY FOR PETROLEUM ENGINEERS

Course/Paper: 03 BPE -104
BPE Semester-III

COURSE CONTENT
UNIT 1: Introduction: Sub division &Importance of geology in petroleum engg., importance structure of the earth, Environment aspects of geology.
UNIT 2: Petrology: origin, classification, texture and structure of igneous, sedimentary and metamorphic rocks, engineering properties of rocks.
UNIT 3: Structural geology: causes and classifications of faults, folds, joints and unconformities.
UNIT 4: Engineering geology: Geological investigation for site selection of tunnels, deep wells, reservoirs and mines. Site improvement techniques.
UNIT 5: Economic geology: Introduction, variety of course, building stones, salt deposits, fuels and industrial minerals

DRILLING FLUIDS AND CEMENTS

Course/Paper: 03 BPE -105
BPE Semester-III
COURSE CONTENT:
UNIT 1: Drilling: Introduction, objectives of drilling, Site selection for drilling.
UNIT 2: Drilling Fluids: Types, functions, Testing of drilling Fluids ,selection and maintenance of drilling fluids, Composition and invasion of drilling fluids.
UNIT 4: Cementing: objective, equipments used in cementing, slurry design for cementing, various techniques of cementing.
UNIT 5: lifts: types of lifts, objectives, pumping system, ESP, gas lift, progressive cavity pumps, PCP rod pumps.

03 BPE -106:

DRILLING TECHNOLOGY

Course/Paper: 03 BPE -106
BPE Semester-III
COURSE CONTENT:
UNIT – I
Drilling operations – Location to Rig. Release Well Bore Diagram, Crews – Operator – Drilling, contractor – Third Party Services – Rig Types – Land Types – Marine types
UNIT – II
UNIT – III
UNIT – IV
UNIT – V
Origin of Overpressure, Kick Signs, shut –in Procedures, Kill sheets, Kill Procedures, Driller’s Methods – Engineer’s Method (Wait and Weight)

PRACTICAL

03BPE -201

PETROLEUM ENGINEERING PRACTICAL 1

Course/Paper: 03 BPE -201

BPE Semester-III (Drilling fluids lab)

a) Measurement & control of the basic Property of Drilling Fluids(density ,Viscosity ,Filtration Lubricity & Electrochemical Properties )and cement slurries(Density, Viscosity, Filtration ,Thickening time.)

c) General processing& crude distillation

d) Cementing techniques

e) Drilling practices

f) Drilling technology operations

03BPE -202

GEOLOGY FOR PETROLEUM ENGINEERS PRACTICAL

Course/Paper: 03 BPE -202

BPE Semester-III

1. Normal Consistency of cement
2. Initial & final setting time of cement
3. Compressive strength of cement
4. Fineness of cement by air permeability and Le-chatalier's apparatus.
5. Soundness of cement.
6. Tensile strength.

II. Coarse Aggregate:

1. Crushing value of aggregate
2. Impact value of aggregate
3. Water absorption of aggregate
4. Sieve Analysis of aggregate
5. Specific gravity, bulk density

III. Fine Aggregate:

1. Sieve analysis of sand
2. Silt content of sand
3. Bulking of sand

IV. Lime:

1. Fineness of lime
2. Setting time and soundness of lime.

V. Physical and mechanical properties of reinforcing steel.

VI. Bricks:

1. Water absorption
2. Dimension Tolerance
3. Compressive Strength
4. Efflorescence.

VII. Geology:

1. Megascopic study of minerals (physical properties and identification).
2. Determination of Specific Gravity of minerals.
3. Megascopic study of the following rocks with special reference to their suitability in Civil Engineering works
   (a) Igneous rocks
   (b) Sedimentary rocks
   (c) Metamorphic rocks
4. Determination of strike and dip & completion of outcrop.
5. Preparation of geological section and study of geological maps with emphasis on the site Selection for dams, tunnels and highways.

**THERMAL ENGINEERING LAB. I**

**Course/Paper: 03 BPE-203**
BPE Semester-III

**LISTOFEXPERIMENTS:**

**Group I:**
1. Comparative study of 4 - stroke Petrol and Diesel Engines
2. Comparative study of 2 - stroke Petrol and Diesel Engines
3. Study of fuel supply system for Petrol engines
4. Study of fuel supply system for Diesel engines
5. Study of Cooling, lubrication and ignition system in diesel and petrol engines

**Group - II:**
1. Study of various types of Boilers
2. Study of various boiler accessories and mountings
3. Study of various types of Dynamometers
4. Study of Multi usage Compressor and perform load test

**Group - III:**
1. To determine B.H.P. and break thermal efficiency of a 4 - stroke diesel engine
2. Study of vapor compression refrigeration system and to find out actual C.O.P. of the system
3. To determine the volumetric composition of exhaust gases and to determine the specific heats and gas constant of the mixture.

**GEOPHYSICAL LAB**

**Course/Paper: 03 BPE-204**
BPE Semester-III

**NAME OF EXPERIMENTS**
1. Determination of Resistivity for various rock structures.
2. Determination of Gravity for various sedimentary formations.

**IV Semester  Petroleum Technology**

**04 BPE -101:**

**ELEMENTS OF PRODUCTION ENGINEERING**

**Course/Paper: 04 BPE-101**
BPE Semester-IV

1. Characteristics of crude oil and natural gas, classification of crude and its physicochemical properties.
2. Introduction to oil & gas field development.
3. **Well equipment:** Christmas tree, valves, hangers, flow control devices, packers, tubular and flow lines.
4. **Introduction to Well completion:** Systems, types and applications.
5. **Introduction to Processing in oil fields:** GGS/CTF - layout, sequential treatment, separation, storage and transportation of petroleum.
6. **Introduction to well servicing and stimulation system** - objectives and applications; Production problems.
7. Principles of crude oil refining process; Natural gas processing and utilization.
8. Introduction to petrochemicals. Value added products from fossil fuels.

**04 BPE -102:**

**ELEMENTS OF RESERVOIRS ENGINEERING**

**Course/Paper: 04 BPE -102**
**BPE Semester-IV**

**UNIT – I**

**UNIT – II**

**UNIT – III**
Well testing – Basic well testing theory – oil well testing: gas well testing – Practical well testing – Gas field reservoir engineering – Fluid phase behaviour – Gas in place volumes and recovery estimations. Reservoir testing and performance analysis: well test – drill stem tests (DST); production tests, pressure tests on gas wells; formation interval testing and other well testing techniques. Coning of water and gas; effects of partial penetration.

**UNIT – IV**
Material balance techniques: Production forecasting – Gas condensate reservoir engineering Fluid phase behaviour development – options.

**UNIT – V**
Well performance – Reservoir management and simulation – reservoir data acquisition – Reservoir simulation. Mathematical basis of bottom hole analysis; Differential equations for radial flow in a porous medium. Pressure draw down and build up analysis

**04 BPE -103:**

**FLUID MECHANICS**

**Course/Paper: 04 BPE -103**
**BPE Semester-IV**

**COURSE CONTENT:**
UNIT - 1

UNIT - 2
Fluid Momentum: The Momentum theorem Applications of the momentum theorem Equation of motion, Euler’s equation of motion Integration of Euler’s equation of motion. Bernoulli’s equation. Applications of Bernoulli’s Pitot tube, Equation of motion for Viscous fluid, Navier Stokes’s equation.

UNIT - 3

UNIT - 4
Turbulent Flow: Variation of friction factor with Reynold’s number. The Prandt Mixing length hypothesis applied to pipe flow, velocity distribution in smooth pipes, sough pipes. The Universal pipe friction laws, Colebrook. White formula.
Dimensional Analysis: Buckingham variables, Model Similitude, Force ratio, Reynolds, Froude’s Mach, Weber and Euler numbers and their applications. Undistorted model distorted model scale effect.

UNIT - 5
The Boundary Layer: Description of the boundary layer. Boundary Layer thickness boundary layer separation and control. The Prandtl boundary layer equation. Solution for cominar boundary layer. The momentum equation for the boundary layer. The flat plate in uniform free stream with no pressures gradients. Approximate momentum analysis laminar boundary
Aerofoil Theory. Flow round a body; Drag skin friction drag, pressure drag. combined skin friction & pressure drag (Profile drag) wave drag, lift induced drag. Flow past sphere & Cylinder

04BPE-104:

ENVIRONMENTAL ASPECTS IN OIL AND ALLIED INDUSTRIES

Course/Paper: 04 BPE - 104
BPE Semester-IV

Industrial pollution and its impact. Magnitude of industrial waste, Legislative regulations. Recycle and reuse of, waste water , recovery of by/c0- product from industrial effluents. Philosophy of waste treatment, scope of air and water
pollution problems, economic considerations of waste disposal, separation and segregation of wastes, gaseous, liquid and solid waste disposal with special reference to oils and allied, product processing. Waste Management Pollution prevention and environment Management system ISO 14000. Waste audit, Quality, management systems, Different regulation means & acts for air, water& solid pollution control.

**WASTE LIQUID TREATMENT:**
Pretreatment methods, centrifugation filtration, evaporator and concentrator, extraction and distillation, treatment of, dilute wastewater. Treatment requirements, Neutralization liquid-solid separation, biological oxidation, plant control, programme, absorption, liquid phase system, reclamtion of waste water effluent and by-product recovery, ion exchange system, acid and alkali purification, continuous ion-exchange,. Case studies on vegetable oil processing, soaps and detergents.

**WASTE GAS TREATMENT:**
Air pollution control by mechanical method: mechanical collectors, electrostatic precipitator, filters, wet scrubbers, vapour phase system, activated carbon. Typical air purification system.

**04 BPE - 105**

**NUMERICAL AND STATISTICAL METHODS**

**Course/Paper: 04 BPE -105**
**Semester-IV**

**Unit 1**
Forward, backward , central and Divided differences,
Newton’s formula of interpolation for equal and unequal intervals. Lagrange’s interpolation formula, Stirling’s and Bessell’s formula,

**Unit 2**
Solutions of systems of equations (Gauss elimination, Gauss Jordan, and Partition method for linear system of equations, power method for partition, method for linear system of equations, power method for finding eigen values),

**Unit 3**

**Unit 4**
Sampling theory: Introduction: Moments, Moment generating functions, Skewness, Kurtosis, Correlation and Regression, Normal sampling distributions; Binomial distribution, Poisson distribution, Normal distribution; Sampling distribution of the means; sampling distribution of the differences of the means; sampling distributions of proportions.

**Unit 5**
Tests of Significance; t-distributions, chi square distributions, F-distributions.
Regression And Correlation; Linear regression; correlation, multiple correlation & partial correlation Confidence Limits; Large samples, small samples, error bands in regression

PRACTICAL:

04BPE201

PETROLEUM ENGINEERING PRACTICAL LAB II

Course/Paper: 04 BPE -201
BPE Semester-IV

(Production and Product Testing Lab.)
1. Petroleum refining processes and operation.
2. Testing of Thermal cracking.
3. Checking of catalytic cracking.
4. Study of hydro-forming, catalytic reforming, alkylation's, polymerization, isomerisation
5. Study of breaking, de-waxing & de-asphalting operations
7. Study of lubricating greases: properties ingredients & additives

04BPE202

TRANSDUSER &MEASUREMENT LAB

Course/Paper: 04 BPE -202
BPE Semester-IV

1. Study the performance of piezo electric transducer for measuring acceleration.
2. Plot the characteristic of potentiometric transducer.
3. To draw the V-I characteristics of Solar panel.
4. To study the operation of Hall effect transducers.
5. Study the performance for measuring distance using ultrasonic transmitter and receiver.
6. Study the performance for measuring displacement-using LVDT.
7. Draw the characteristics for the following temperature transducers: (a) RTD (Pt-100) (b) Thermistors (c) Thermocouple
8. To study and draw the characteristics of LDR.
9. Measure the speed of table fan by using stroboscope.
10. Measurement of strain/force with the help of strain gauge load cell.
11. Study the various pressure and force sensors.
12. Study the Flapper Nozzle mechanism

04BPE203
SURVEYING LAB-I

Course/Paper: 04 BPE -203
BPE Semester-IV
1. Ranging and Fixing of Survey Station.
2. Plotting Building Block by offset with the help of cross staff.
3. To determine the magnetic bearing of a line a.
   Using surveyor's compass
   b. Using prismatic compass
5. To determine the reduced levels using Tilting Level.
6. To determine the reduce levels in closed circuit using Dumpy Level.
7. To carry out profile leveling and plot longitudinal and cross sections for road.
8. To carry out temporary adjustment of Theodolite.
   a. By method of repetition.
   b. By method of Reiteration.
10. To determine the tachometric constant.
11. To determine the horizontal and vertical distance by tachometric survey.
12. To study the various minor instruments.
13. To determine the area of a figure using a planimeter.

04BPE204

FLUID MECHANICS LAB

Course/Paper: 04 BPE -204
BPE Semester-IV

LIST OF EXPERIMENTS:

1. Determine Metacentric height of a given body.
2. Determine Cd, Cv & for given orifice
3. Determine flow rate of water by V-notch.
4. Determine velocity of water by pitot tube.
5. Verify Bernoulli's theorem.
6. Determine flow rate of air by Venturi meter.
7. Determine flow rate of air by orifice meter.
8. Determine head loss of given length of pipe
9. Determine flow rate of air by nozzle meter.
10. Study of Pelton, Kaplan Turbine models.

V Semester Petroleum Technology

05 BPE -101:

THERMODYNAMICS OF PETROLEUM RESERVOIR FLUIDS

Course/Paper: 05 BPE -101
BPE Semester-V

Maxwell relations and basic thermodynamic relations, Work calculation, Thermodynamics of Gases and Liquid Hydrocarbons, Perfect & imperfect gaseous mixtures, Equation of state, Law of corresponding states, Joule Thompson
effect, Fugacity and fugacity coefficient of gases and gaseous mixtures, Solution Thermodynamics, Phase Rules, Statistical Thermodynamics

Books
b) Engineering thermodynamics: C.P. Gupta, Rajendra Prakash, Nemi Chand & Bros
c) Thermodynamics by-Yunus A Cengel (university of Nevada Reno & Michall A Boles North Caralina State University (Publisher Tata MC Graw hill)
d) Chemical Engg Thermodynamics by—Pandey and chaudhri
e) Chemical Thermodynamics : J.C.Vanness In India adopted by B.I Bhatt Ahemdabad Publisher Tata MC Grawhill

05 BPE -102:

PETROLEUM PRODUCTION OPERATION

Course/Paper: 05 BPE -102
BPE Semester-V

References
a) Gas Production Engineering : S.Kumar-Gulf Publishing co,1987

05 BPE -105:

APPLIED PETROLEUM RESERVOIR ENGG AND MANAGEMENT

Course/Paper: 05 BPE -105
BPE Semester-V

Production behavior of gas, gas condensate and oil reservoirs. Generalized MBE etc. Drive mechanism and recovery factors. Performance prediction and reservoir pressure maintenance.
Geology of Reservoirs, Rock & fluid Properties Reservoir system, Reservoir Heterogeneities/Anisotropies Geo statistics in Reservoir characterization
Reservoir management concepts and Processes, Fundamentals, Data acquisition, Interpretation and integration, Treatment of fractional flow & front. Reservoir modeling and simulation for reservoir management.
Integration of Exploration and development technology
Reservoir Performance analysis and Prediction conservation of Reservoir Energy, Influence of Reservoir structure on water control, Reservoir Economics, Risk and uncertainties, Economic evaluation and optimization
Application of Improved Recovery Processes, New Drilling and completion and production technology, Use of artificial intelligence

05 BPE -106:

UNIT OPERATIONS AND PROCESS ENGINEERING

Course/Paper: 05 BPE -106
BPE Semester-V

UNIT I

UNIT II
Concept of material balance: Application of material balance to unit operations like distillation, evaporation, drying, crystallization and mixing.-Material balance involving key components, Recycle and by passing operations – concept of purge.

UNIT III
Material balance with chemical reaction: Limiting and excess reactants – Degree of completion, Application of material balance to various types of chemical reactions. Calculation of absolute humidity, molal humidity, relative humidity and percentage humidity – Dew point – Use of humidity in
condensation and drying – Wet and dry bulb temperatures, Humidity chart, solving problems using psychrometric charts.

UNIT IV
Calculation of orsat analysis of products of combustion of solid, liquid and gas fuels – Calculation of hydrogen to carbon ratio and percentage excess air from flue gas analysis, calculation of sulphur and sulphur compounds burning operations

UNIT V Heat capacity of solids, liquids, gases – mean heat capacity – calculation of sensible heat using heat capacity, Kopp’s rule, various types of latent heats. Energy balances – enthalpy data including steam tables and psychrometric charts, heat capacity data, phase change, mixing, heat of solutions, heat of formation, combustion and reaction.

Text Books:

Reference Books:

PRACTICAL:

05BPE201
Course/Paper: 05 BPE -201
BPE Semester-V

A. Turbo C Graphics: To make C programs to Animate/ different Mechanisms:
   1. Slider Crank Mechanism
   2. Quick Return Mechanism
   3. Cam Follower etc.

B. Auto CAD
   1. To make a component drawing.
   2. To make a assembly drawing.
   3. To make sectional views using concept of layers
   4. To develop 3D surface models
   5. To develop 3D solid models
   6. 

C. MINI PROJECT Using Turbo C/ Auto CAD

05BPE202

SEDIMENTRY & PETROLIUM GEOLOGY PRACTICAL

Course/Paper: 05 BPE -202
BPE Semester-V

1. Physical Properties of Minerals
2. Physical Properties of Rocks
3. Identification of Minerals in Hand Specimen
4. Identification of Rocks in Hand Specimen
5. Identification of Geological features through wooden Models
   a) Structural Geological Diagrams
b) Petrological Diagrams

c) Engineering Geological Diagrams

6. Interpretation of Geological Map (10 Nos.)
7. Dip & Strike Problems (8 Nos.)
8. Estimation of Thickness, distance & Depth of ore body
9. Estimation of Throw & nature of the faults
10. Identification of important sedimentary rocks in Microscopic level

**05BPE203**

**PROD. ENGG. LAB**

**Course/Paper: 05 BPE -203**

**BPE Semester-V**

1. Study of foundry shop equipment.
2. To Prepare mould of a given moulding sand sample
3. To determine the moisture content in the given moulding sand
4. To determine the permissibility of the given sample of moulding sand
5. To study the sieve shaker equipment and to determine the grain fineness number of a given sample
6. To perform the clay content test

**SHEET METAL SHOP**

To prepare a funnel and solder to joint

**WELDING SHOP**

Demonstration of various welding defects and dye penetrate test.

**PATTERN SHOP**

1. To prepare a two piece pattern as per draw
2. To prepare a pattern with core prints and a core box draw
3. For the job given, prepare a drawing with all types of allowances and casting consideration. Show the position of riser runner, chills & chaplets etc, needed for directional solidification Drag.
4. Quiz and Viva based on the above shops at an appropriate time will be arranged

**TURNING SHOP**

1. Study of lathe machine, lathe tools, cutting speed, feed and depth of cut
2. To perform step turning, knurling & chamfering on lathe machines per drawing.
3. Taper turning by tail stock off-set method and to grind it by grinding attachment as per drawing
4. To taper turn using turning attachment as per drawing
5. To perform square threading, drilling and taper turning by compound rest as per drawing

**METROLOGY:**

1. Study of the following measuring instruments. Vernier Calliper, Vernier height gauge, depth micrometer, inside, outside micrometer.
2. Study & use of bevel protector and combination set. Quiz and Viva based on the above shop will be arranged at an appropriate time
3. To calibrate pneumatic comparator and measure taper of a given work piece.

**05BPE-204**

**SURVEYING PRACTICALS**

**Course/Paper:** 05BPE-204
BPE Semester V

1. To determine the height of an object by trigonometrically leveling (Single plane method)
2. To determine the height of an object by trigonometrically leveling (two plane method)
3. To determine the height of an unknown point by double leveling
4. To measure and adjust the angle of a braced quadrilateral
5. To prepare a contour map by indirect contouring
6. To prepare a map of a given area by plane tabling
7. To carry out leveling through help of a theodolite.

VI Semester

VI Semester Petroleum Technology

Course/Paper: 06 BPE -101
BPE Semester-VI

Casing Design, Cementing Practices, Directional Drilling, and methods tools, Well Surveying, Measurements While Drilling etc.

References
a) Drilling & Casing Operations : J.A. Jim Short , Penwell Publishing CompanySouth Sheridan Road Tulsa Oklahoma 74101

06 BPE -102:

PETROLEUM FORMATION EVALUATION

Course/Paper: 06 BPE -102
BPE Semester-VI

UNIT – I Aims and objectives of well logging. Direct Methods and Indirect Methods Special Type of Logging Tools Reservoir formations. Borehole conditions. Fundamental concepts in borehole geophysics physical properties of reservoir rocks. Formation parameters and their relationships: formation factor, porosity, permeability, resistivity, water and hydrocarbon saturations, and movable oil. Archie’s and Humble’s equations.

UNIT – II Principles, instrumentation, operational procedures and applications of different geophysical logs: S.P., electrical, induction, nuclear, sonic, caliper, temperature, dip and direction. Natural gamma ray spectrometry log, nuclear magnetic log, litho density log, neutron activation technique, thermal neutron decay time log, chlorine and oxygen logs.

UNIT – V  Theoretical computations of normal and lateral log responses. Identification and delineation of sub-surface formations from well log data. Calculation of reservoir parameters: formation factor, porosity, permeability, resistivity, water and hydrocarbon saturations, and movable oil. Sub-surface correlation of formations and interpretation of field data.

06 BPE -104:

HEAT AND MASS TRANSFER

Course/Paper: 06 BPE -104
BPE Semester-VI
UNIT I
Introduction to various modes and mechanisms of heat transfer. Fourier’s law of heat conduction – one dimensional steady state heat conduction equation for flat plate, Composite walls, Hollow cylinder, Rate equations. Heat conduction
with heat generation, Thermal conductivity measurement, Effect of temperature on thermal conductivity. Critical radius of insulation, Heat transfer in extended surfaces, Transient heat condition

UNIT II

UNIT III
Parallel and Counterflow heat exchangers – Log Mean Temperature Difference – single pass and multipass heat exchangers, plate heat exchangers. Effectiveness by using NTU, Fouling factors design of various types of heat exchangers.

UNIT IV
Diffusion in fluids – Molecular and eddy diffusion measurement and calculation of diffusivities. Ordinary diffusion in multi component gaseous mixtures. Difusional heat transfer based on shell balances approach for one-dimensional steady state and transient transfer with heat.

UNIT V

Text Books:

Reference Books:

06 BPE -105:

OBJECT ORIENTED PROGRAMMING AND ADVANCED NUMERICAL METHODS

Course/Paper: 06 BPE -105
BPE Semester-VI

UNIT 1
Introduction to Object Oriented Programming: Basic concepts: Class, Object, Method, Message passing, Inheritance, Encapsulation, Abstraction, Polymorphism.

UNIT 2
Basics of C++ Environment: Variables; Operators; Functions; user defined, passing by reference, passing an array to the function, inline function, scope, overloading; Pointers: objects and Ivalue, arrays and pointers, the new and delete operators, dynamic arrays, arrays of pointers and pointers to arrays, pointers to pointers and functions; Strings: String I/O, character functions in ctype.h, string functions in string.h.

UNIT3
Object oriented concepts using C++: Classes: Member functions, Friend functions, Constructors, Access functions, Private member functions, class destructor, static data and function members; Overloading: inline functions, this operator, overloading various types of operators, conversion operators; the String Class; Composition and Inheritance: Hierarchy and types of inheritance, protected class members, private versus protected access, virtual functions and polymorphism, virtual destructors, abstract base classes.

UNIT 4
Templates and Iterators: function and class templates, container classes, subclass templates, iterator classes; Libraries: standard C++ library, contents of a standard C headers, string streams, file processing: Files and streams classes, text files, binary files, classification of files, the standard template library.
UNIT 5
Advance Numerical methods for solving different complex equations

References

06 BPE -106:

PETROLEUM REFINING AND PETROCHEMICALS

Course/Paper: 06 BPE -106
BPE Semester-VI

UNIT I
Origin, exploration and production of Petroleum, Types of crudes, composition, characteristics, Products Pattern, Indigenous and imported crudes.

Crude heating, primary distillation principles, separation of cuts, gaps / overlaps, stripping. Desalting heat balance in distillation, energy input and recovery, vacuum distillation, types of trays, drawoffs, intermediate product, quality control.

UNIT II
Lube oil and wax processing, solvent extraction, dewaxing desilting, deasphalting, clay contacting, principles operating parameters, feed and product equalities and yields.

Types and functions of secondary processing, cracking, thermal cracking and visbreaking, different feed stocks, products, yields and qualities.

UNIT III
Fluid catalytic feed stocks and product yields and qualities. Catalyst and operating parameters.

Steam Reforming, Hydrogen, Synthesis gas, cracking of gaseous and liquid feed stocks, olefins, Diolofins, Acetylene and Aromatics and their separation.

UNIT IV
UNIT PROCESSES

Alkylation, oxidation, dehydrogenation, nitration, chlorination, sulphonation and isomerisation.

UNIT V
POLYMERISATION

Models and Techniques, production of polyethylene, PVC, Polypropylene, SAN, ABS, SBR, Polycrylonitrile, Polycarbonates, Polyurethanes, Nylon, PET

PRACTICALS:
06BPE201
PETROLEUM ENGINEERING PRACTICAL – III
Course/Paper: 06 BPE -201
BPE Semester-VI
1. PETROLEUM FORMATION EVALUATION: Direct Methods and Indirect Methods. Special Type of Logging Tools.
2. Study of flow of fluids.
3. Study of engineering. gas flow measurement, Natural Gas dehydration, sweetening and Processing for LPG, LNG.
4. Techniques of transmission of Natural Gas.

06BPE202
OBJECT ORIENTED PROGRAMMING AND ADVANCED NUMERICAL METHODS
Course/Paper: 06 BPE -202
BPE Semester-VI
List of programs in C:
1. Program for revising control statements, arrays and functions.
2. Program using string handling and various functions described in string.h, ctype.h.
3. Program using structures and sorting algorithm (Insertion, Selection, Quick, Heap sort) and functions described in math.h.
4. Program using file handling and related functions defined in stdio.h, io.h.
5. Program using pointers, array and pointers, pointers to structures, dynamic memory allocation.
List of Programs in C++
6. Program using basic I/O and control statements.
7. Program using class, objects, objects as function parameters.
8. Program using functions and passing reference to a function, inline functions. Program using Inheritance and virtual base class.
9. Program using pointers, arrays, dynamic arrays. Program using functions defined in c type.h and string.h.
10. Program using constructors, destructors. Program using function and operator over loading List of program in C++ implementing Data Structures
11. Creating and managing (add, delete, print, insert) nodes of a Linked list.
12. Creating and managing (create, pop, push etc.) stacks and queues.

Note: Students should submit and present a minor project at the end of the lab.

06BPE203
PRODUCTION PRACTICE LAB
Course/Paper: 06 BPE -203
BPE Semester-VI
1. To study of single point cutting tool geometry & to grind the tool to the given tool geometry. Write importance of various angles and to prepare a capacity chart of the Tool & cutter grinder.
2. a. To study milling machine, milling cutters, indexing methods and various indexing heads.

b. Prepare a gear on milling machine.

3. Prepare a hexagonal/octagonal nut using indexing head on milling m/c and to cut bsw/ matrix internal threads on lathe (to meet with job).
4. a. To prepare the capacity chart for a lathe machine.
b. To cut multi-start square/metric thread.
c. To cut external metric threads & to mesh it with the nut (drg).
d. Prepare the process chart for the job.
5. To prepare the job by eccentric turning on lathe machine drawing.
6. To study shaper machine & its mechanism and calculate its quick return ratio To prepare a job on shaper from given ms rod drawing.
7. To study the effect of rake angle on chip thickness ratio and the shear angle in orthogonal machining.
8. Using drill dynamometer measure the torque and thrust force in drilling and to plot the characteristics, torque, force & power v/s speed & feeds.
9. To measure a gap by means of slips gauges. To compare & assess the method of small-bore measurement with the aid of spheres.
10. To check the accuracy of a ground machined/lapped flat surface. To check the accuracy of machined cylindrical surface.
11. To measure effective diameter of a screw thread by three wire method.
12. To perform alignment test on a center lathe
13. Measure the taper of a given test piece with the help of a single bar and Compare it.
14. To plot tangential, feed and radial force as a function of cutting speed a feed in turning.

THERMAL LAB.- II

Course/Paper: 06 BPE -204
BPE Semester-VI

I.C. Engine Lab.
1. To find the valve timing of a four stroke single cylinder diesel engine and show the valve timing on actual P.V.diagram
2. To conduct load test on diesel engine.
   a) Determine the Willien's line by graphical and regression method.
   b) To find out brake power, brake and indicated thermal efficiency, mechanical efficiency, bsfc, isfc, IMEP, BMEP, Air fuel ratio, specific brake output, mean piston speed, clearance volume.
   c. Plot-Load v/s above parameter
3. To measure the smoke density by smoke meter in diesel engine and plot load v/s smoke density at constant speed.
4. To find out the corrected performances parameters (as indicated in Exp. 2(b)) on diesel engine and to plot the heat balance sheet.
5. Study of Zenith carburetor and a simple carburetor used in two wheelers.
6. To plot the pressure ratio profile along the length of a given nozzle by using different back pressures and to compare actual and theoretical area
7. To perform load test on dual fuel engine at (I) constant load variable gas supply. (II) Variable load test on 2-stroke petrol engine at constant speed variable throttle and variable speed constant gas supply
8. To perform load test on 2 stroke engine at constant speed variable throttle and variable speed constant throttle
9. To study the (A) Wankle Engine (B) electronic Ignition System (C) Conductivity of Metal rod

07 BPE -102:

ON SHORE AND OFFSHORE DRILLING

Course/Paper: 07 BPE -102
BPE Semester-VII
UNIT-I
Introduction to offshore oil and gas operations, Sea States and Weather, Offshore Fixed and mobile Units, Offshore Drilling, Difference in drilling from land, from fixed platform, jack up, ships and semi submersibles. Offshore Well Completion, Offshore Production systems, Deep-water technology, Divers and Safety, Offshore Environment.

UNIT-II

UNIT-III
Drilling. Sampling techniques. Laboratory testing. In situ testing methods and geophysical methods. Current design practices of pile supported and gravity offshore structures.

UNIT-IV

UNIT-V
Offshore soil mechanics; offshore pile foundations and caissons; Design of breakwaters; Buoy design and mooring systems; Offshore drilling systems and types of platforms; Ocean mining and energy systems. ROV. Onshore drilling-on shore oil rigs, onshore drilling equipments-onshore rig structures-hydraulics applied in onshore rigs.

07 BPE -103:  

PETROLEUM FIELD INSTRUMENTATION & CONTROL

Course/Paper: 07 BPE -103  
BPE Semester-VII

COURSE CONTENT:

Unit 1: Introduction:  
Classification of instruments, metrological terms, definitions, units and standards, performance characteristics, calibration requirement, Hierarchy of standards and traceability, measurement of uncertainty codes and symbols etc.

Unit 2: Process Instrumentation:  
Instruments for indicating, recording and control of pressure (including mud pressure), flow, temperature, viscosity, level, pH, density, weight, penetration, torque, RPM, magnetic flux.

Unit 3: Petroleum Field Instrumentation:  
Instrumentation at drilling site, separation, transportation and storage of oil and gas operations. Aspects of process safety and reliability related to instrumentation, pipeline monitoring.

SECTION – II

Unit 4: Elements of Process Control:  
Introduction to process control, basic principles. Applications of Process Control. Control loop and its components. Concept of transfer function and transient response of first and second order elements

Unit 5: Introduction to Controllers:  

Unit 6: Process Control of Petroleum Field Operations:  
Applications of controls for drilling, separation, transportation and storage of oil and gas operations. DCS. SCADA. Introduction to Ladder Logic Logics for safe shutdown and startup.

BPE Semester-VII

COAL BED METHANE:

NATURAL GAS HYDRATES:

BPE -201

PRACTICAL:

07BPE201

MINOR PROJECT

Course/Paper: 07 BPE -201
BPE Semester-VII

07BPE202
PETROLEUM FIELD INSTRUMENTATION AND CONTROL LAB

Course/Paper: 07 BPE -202
BPE Semester-VII

List Experiments:
1. To determine control valve characteristics.
2. To determine transient response of first and second order systems.
3. To determine response of feedback control loop using PID controller: Three practical.
4. To determine controller tuning parameters using open loop response.
5. To determine static and dynamic characteristics and to understand calibration of a temperature measuring instrument.
6. To determine static and dynamic characteristics and to understand calibration of a level measuring instrument.
7. To determine static and dynamic characteristics and to understand calibration of a flow-measuring instrument.
8. To determine static and dynamic characteristics and to understand calibration of a pressure-measuring instrument.
9. To learn to use user interfaces of SCADA and PLC with reference to a simple control scheme.
10. To determine characteristics of mass flow meter.
11. To determine characteristics of optical pyrometer.

07BPE203 SEMINAR

Course/Paper: 07 BPE -203
BPE Semester-VII

Format of the Seminar report should be as follows:
1. The report should be neatly written or typed on white paper. The typing shall be with normal spacing and on one side of the paper (A-4 size).
2. The report should be submitted with front and back cover of card paper neatly cut and bound or spirally together with the text.
3. Front cover: This shall have the following details.
   a. Title of the seminar report.
   b. The name of the candidate with roll number examination seat number at the middle.
   c. Name of the guide below the candidate’s details.
   d. The name of the institute and year of submission on separate lines at the bottom.
4. Seminar approval sheet.
5. The format of the text of the seminar reports:
The report shall be presented in the form of a technical paper. The introduction should be followed by literature survey. The report of analytical or experimental work done, if any, should then follow. The discussion and conclusions shall form the last part of the text. They should be followed by nomenclature and symbols used followed by acknowledge the bibliography should be at the end. References should be written in the standard format. SPE format for Petroleum Engineering be followed in giving references. The total number of typed pages, excluding cover shall be about 25 to 30 only. All the pages should be numbered. This includes figures and diagrams. Two copies of the seminar report shall be submitted to the college. The candidate shall present the seminar before the examiners. The total duration of presentation and after-discussion should be about 30 minutes. (25 min + 5 min. Audience can ask questions only if the examiner permits. Such questions will not have any bearing on marks).

INDUSTRIAL TRAINING

Course/Paper: 07 BPE -204
BPE Semester-VII

Industrial visit (20 marks) is for the duration of 10 days at the end of V semester and Practical Training (80 marks) is for the duration of 30 days at the end of VI semester. Both will be evaluated during the VII semester.

VIII Semester Petroleum Technology

08 BPE -101:
RESERVOIR MODELING AND SIMULATION

Course/Paper: 08 BPE -1016+
BPE Semester-VIII

Reservoir Modeling:
Introduction to general modeling : Introduction to concept geological modeling. Types of model and designing of various models depending on reservoir complexities, rock properties, fluid properties – concept of back oil model, compositional model.

Reservoir Simulation :
1. Overview : Introduction, Historical background, application of simulator, various types of models.
2. Flow Conditions : Single phase, two phase and multiphase flow equations for one, two and three dimension models.
4. Data Preparation :
5. Pseudofunctions
6. Reservoir model Solution Techniques : Implicit Pressure and Explicit Saturation (IMPES), Implicit pressure and Implicit saturation (IMPIS).
7. Preview of numerical solution methods : Direct process, iterative process.
8. History Matching : Mechanics and parameters of match
9. Special Concept on Coning and Compositional Models simulation.
11. Introduction to streamline simulation & comparison of conventional/Streamline simulation.

08 BPE -102:

SURFACE OPERATIONS FOR OIL & GAS PRODUCTION

Course/Paper: 08 BPE -102
BPE Semester-VIII

Field Processing of Oil & Gas. Storage & Transport and metering. Transport of Oil & Gas. Treatment of oil & gas, surface facility for oil pumping station, gas pumping station, water injection, gas injection and EOR processes.

References
c) Surface Production Operations: Design Of Oil Handling Systems And Facilities( Volume 1 ):Maurice Stewart KenArnold

08 BPE -103:

OIL & GAS WELL TESTING AND ENHANCED OIL RECOVERY

Course/Paper: 08 BPE -103
BPE Semester-VIII

Well Test Analysis, Pressure Transient Tests, Enhanced Oil Recovery , methods and evaluation. Like Gas Injection, Miscible Flooding, Polymer Flooding, Carbon Dioxide Flooding and steam Flooding

References

08 BPE -104: PIPE LINE ENGINEERING

Course/Paper: 08 BPE -104
BPE Semester-VIII

Pipeline systems definition and applications, codes and standard related to pipelines. Pipeline hydraulics: single phase gas and liquids, multiphase fluids and heavy /waxy crude. Design considerations for strength, stability and installation.
Pipeline materials and components. design aspects, covering such issues as risers, slug catchers, pigging facilities, etc. Basic design considerations for pipeline facilities. Pipeline construction for cross country and offshore systems focusing on welding. Pressure testing, pre-commissioning and commissioning Pipeline integrity aspects including inline inspection. Leak detection and emergency planning Considerations
Flow through pipe. Flow through perforated pipes and porous media. Two phase flow. Line sizing for steam, vacuum, and slurry pipeline.

References
a) Piping design handbook: Macetta, John, M dekar1992
b) Pipeline & risers: Young Boi, Elsevier Ocean Engineering Book series 2001 Volume 3

1. Develop various Geological model.
2. Running simulation model
3. Verify geological model with simulation software
